Common Neurosurgical Conditions in the Pediatric Practice Jeffrey P. Greenfield 2016-09-15 This unique title is designed to illustrate and foster how a closer

working relationship between pediatricians and subspecialists can make childhood medicine work more seamlessly. Despite the common lack of training for pediatricians in pediatric neurosurgery, they are challenged almost daily with caring for children with neurologic conditions. Common Neurological Conditions in the Pediatric Practice is replete with a wide range of instructional case vignettes and is organized into sections that loosely approximate the neurologic development of a child and address issues that are commonly encountered. The first section reviews neurologic development and birth related trauma commonly seen in the neonatal intensive care unit. The second part addresses findings commonly encountered by a pediatrician in a child's first month of life. The third section is a comprehensive review of hydrocephalus. Part four describes state of the art imaging techniques for the central nervous system in children, from pre-natal ultrasound through MRI and CT; and the fifth part consists of individual explorations of common neurosurgical conditions that many pediatricians are uncomfortable managing, including brain tumors, spasticity, and vascular lesions to use as a reference tool when caring for a complex neurosurgical patient. Finally a series of chapters related to head trauma, including sections on non-accidental trauma and concussion management, completes the text.

Psychiatry Board Review Dr. Rajesh Tampi 2017-03-29 The field of psychiatry is evolving rapidly specifically in the areas of classification of many psychiatric disorders, psychopharmacology and psychotherapeutics. The new Diagnostic and Statistical Manual of Mental Disorders: DSM-5 which was introduced in 2013 forms the basis of the new classification system in psychiatry. The American Board of Psychiatry and Neurology is also in the process of phasing in DSM-5 criteria to the board examination, such that by 2017 the examination material will exclusively reflect the new manual. As psychiatric trainees and psychiatrists prepare for their certification and recertification examinations using the new classification system, a new board review textbook is imperative to address these changes in order to prepare them for the certification examinations as well as for their clinical practice. To help with this process we have compiled a list of 1000 questions and answers in psychiatry and neurology using the most current information available in the field and using the DSM 5 classification system. This book has been specifically written for the busy professional who does not have the time to access numerous resources necessary to prepare for professional examinations.

Neurologic Differential Diagnosis Alan B. Ettinger 2014-04-17 "There is an apocryphal story of an eminent neurology professor who was asked to provide a differential diagnosis. He allegedly quipped: "I can't give you a differential diagnosis. If you wish I will give you a list of wrong diagnoses followed by the right diagnosis." Sadly, this sort of arrogance pervaded our field, particularly in the era before there were accurate diagnostic methods and effective treatments of neurological diseases. Fortunately, this sort of pomposity is now relegated to the past and remains only as an antique reminder of a type of hubris that precluded discovery and progress in diseases of the nervous system"--

The Greenberg Rapid Review Leonard I. Kratzler 2016-11-15 Written by an esteemed educator and founder of the renowned Chicago Review Course in Neurological Surgery™, this updated review reflects substantive content additions to the 8th edition. Neurologic Emergencies Latha Ganti 2018-01-04 This book is an unparalleled resource on neurologic emergencies. Most books on neurologic emergencies focus on treatment of a disease after it is diagnosed (such as stroke, subarachnoid hemorrhage, or meningitis). There are but a few books that focus on how to evaluate the patient with a neurologic symptom, before the diagnosis is made. This is the area that frontline providers, including emergency physicians, family physicians, primary care physicians, hospitalists, urgent care physicians, and midlevel providers struggle with. This book is written by clinicians with a clear understanding of the needs of non-neurologists in the front lines of medicine. The

editors are board-certified emergency physicians with fellowship training and expertise in neurologic emergencies.
