**Pressure Cooker Perfection** America's Test Kitchen 2013-03-15 100 foolproof pressure-cooker recipes that will change the way you cook. In Pressure Cooker Perfection, the first volume in our new test kitchen handbook series, the editors at America's Test Kitchen demystify an appliance that to many home cooks remains intimidating -- but shouldn't. Modern pressure cookers are safer, quieter, more reliable, and more user-friendly than old-fashioned jiggle-top models. And they can prepare a wide range of foods -- everything from barbecue to risotto -- in record time. Cooking under pressure results in better-tasting dishes because every drop of flavor is trapped in the sealed pot. This fact, combined with the shorter cooking time, means that your dishes will be supercharged with flavor. And cooking under pressure is versatile. While they're ideal for roasts and stews, pressure cookers can also turn out perfectly tender beans, grains, and legumes in short order. If ever there was a cooking method that could benefit from the obsessive trial and error that our test kitchen is known for, this is it. When cooking time is compressed, every minute matters, and when flavors are amplified, even a small change becomes significant. We ran hundreds of tests in fifteen pressure cookers to find out what works and what doesn't, and we deliver the foolproof, guaranteed-successful recipes in Pressure Cooker Perfection. With this foolproof guide to cooking under pressure, every home cook will be guaranteed success.

**Doubled Haploid Production in Crop Plants** M. Maluszynski 2013-06-29 The production of doubled haploids has become a necessary tool in advanced plant breeding institutes and commercial companies for breeding many crop species. However, the development of new, more efficient and cheaper large scale production protocols has meant that doubled haploids are also recently being applied in less advanced breeding programmes. This Manual was prepared to stimulate the wider use of this technology for speeding and

opening up new breeding possibilities for many crops including some woody tree species. Since the construction of genetic maps using molecular markers requires the development of segregating doubled haploid populations in numerous crop species, we hope that this Manual will also help molecular biologists in establishing such mapping populations. For many years, both the Food and Agriculture Organization of the United Nations (FAO) and the International Atomic Energy Agency (IAEA) have supported and coordinated research that focuses on development of more efficient doubled haploid production methods and their applications in breeding of new varieties and basic research through their Plant Breeding and Genetics Section of the Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture. The first FAO/IAEA scientific network (Coordinated Research Programme - CRP) dealing with doubled haploids was initiated by the Plant Breeding and Genetics Section in 1986.

Taken together, his translation and commentary truly constitute a "cookbook for life," one that shows us how to live with an unbiased mind in the midst of our workaday world.
