Rethinking Entrepreneurial Human Capital [Pittob Bosio](#) 2018-06-04 This book focuses on the specific traits and nature of entrepreneurial human capital and the extent to which it can be stimulated by entrepreneurial education – especially when these activities combine collaborative practices and innovation. It includes a comprehensive collection of articles on how entrepreneurship education can be structured, providing reflections as well as empirical evidence. As such it contributes to the ongoing debate on the teachability of entrepreneurial skills and the role of innovation and collaboration in the design of educational programs to spread entrepreneurial human capital.

Computational Biomechanics [Kozaburo Hayashi](#) 2012-12-06 The combination of readily available computing power and progress in numerical techniques has made nonlinear systems - the kind that only a few years ago were ignored as too complex - open to analysis for the first time. Now realistic models of living systems incorporating the nonlinear variation and anisotropic nature of physical properties can be solved numerically on modern computers to give realistically usable results. This has opened up new and exciting possibilities for the fusing of ideas from physiology and engineering in the burgeoning new field that is biomechanics. Computational Biomechanics presents pioneering work focusing on the areas of orthopedic and circulatory mechanics, using experimental results to confirm or improve the relevant mathematical models and parameters. Together with its companion volumes, Biomechanics: Functional Adaptation and Remodeling and the Data Book on Mechanical Properties of Living Cells, Tissues, and Organs, this monograph will prove invaluable to those working in fields ranging from medical science and clinical medicine to biomedical engineering and applied mechanics.

Comparative Dispute Resolution [Mania F. Moscati](#) 2020-12-28 Comparative Dispute Resolution offers an original, wide-ranging, and invaluable corpus of essays on dispute resolution. Enriched by a broad, comparative vision and a focus on the processes used to handle disputes, this study adds significantly to the discourse on comparative legal studies. From a comparative perspective, this Research Handbook analyses the field of dispute processing, generally and across a broad range of legal systems and their legal cultures. It explores the nature of disputes and the range of basic processes used in their resolution, examining emerging issues in theoretical practice and analysing differing traditions of dispute resolution and their 'modernisation'. Offering a balanced combination of theory and praxis, chapters present new understandings of theoretical, comparative and transnational dimensions of the manner in which societies and their legal systems respond to difficult international relations. Showcasing opportunities for new research and debate, Comparative Dispute Resolution will be of interest to practitioners and those engaged in the practice of handling disputes. Students and scholars in disciplines as diverse as law, sociology, politics and psychology will also find this topical Research Handbook useful in their understanding of the theory and practice of disputing and dispute management, legal reform and enhancement of access to justice.

Philosophical Foundations of Adult Education L. Elias 2005 "The Third Edition of Philosophical Foundations of Adult Education presents seven theoretical approaches to adult education: liberal, progressive, behaviorist, humanist, radical/critical, analytic, and postmodern. The book gives the historical grounding as the basic principles for each approach. In this edition each chapter has been revised and brought up to date. The chapter on radical adult education incorporates recent developments in radical education, phenomenology, feminist educational theory, and critical social theory. The book contains an entirely new chapter on postmodern adult education."

Italy's Many Diasporas Donna R. Gabaccia 2013-10-18 Italy's residents are a migratory people. Since 1800 over 27 million left home, but over half also returned home again. As cosmopolitans, exiles, and 'workers of the world' they transformed their homeland and many of the countries where they worked or settled abroad. Do they form a diaspora? Migrants maintained firm ties to native villages, cities and families. Few felt much loyalty to a larger nation of Italians. Rather than form a 'nation unbound,' the transnational lives of Italy's migrants have kept alive international regional cultures that challenged the hegemony of national states around the world. This ambitious and theoretically innovative overview examines the social, cultural and economic integration of Italian migrants. It explores their complex yet distinctive identity and their relationship with their homeland through a comprehensive approach.

Invisible Cities Italo Calvino 2013-08-12 Italo Calvino's beloved, intricately crafted novel about an Emperor who travels—a brilliant journey across far-off places and distant memory. "Cities, like dreams, are made of words and fears, even if the thread of their discourse is secret, their rules are absurd, their perspectives deceitful, and everything conceals something else." In a garden sit the aged Kublai Khan and the young Marco Polo—emperor and Venetian traveler. Kublai Khan has sensed the end of his empire coming soon. Marco Polo tells his host with stories of the cities he has seen in his travels around the empire: cities and memory, cities and desire, cities and designs, cities and the dead, cities and the sky, trading cities, hidden cities. As Marco Polo unspools his tales, the emperor detects these fantastic places are more than they appear.

The Language of the News Martin Conboy 2013-12-16 The Language of the News investigates and critiques the conventions of language used in newspapers and provides students with a clear introduction to critical analysis as a tool for analysis. Using contemporary examples from UK, USA and Australian newspapers, this book explores with key themes of representation – from gender and national identity to 'race'– and looks at how language is used to construct audiences, to persuade, and even to parody. It examines debates in the newspapers about the nature of language including commentary on political correctness, the sensitive use of language and irony as a journalistic weapon. Featuring chapter openings and summaries, activities, and a wealth of examples from contemporary news coverage (including examples from television and radio), The Language of the News broadens the perceptions of the use of language in the news media and is essential reading for students of media and communication, journalism, and English language and linguistics.

Labour Law and Industrial Relations in Recessionary Times Anthony Forsyth 2014-01-14 This volume includes a number of papers written in English and published in the last fifteen years in which the Italian labour market has faced many changes. The book not only provides the international readership with a frame of reference of conceptual and legal terms – that helps to appreciate the Italian Labour Law currently in force, but also represents a contribution to moving beyond the self-referential nature of the Italian debate on the reform of labour laws. As such, the book supplies the reform process of the Italian labour market with an international comparative dimension which – in accordance with the programmatic approach of Marco Biagi – will advance the debate at the national level.

Systemics of Incompleteness and Quasi-Systems Franco Minati 2020-08-14 This book contains the proceedings of the Seventh National Conference of the Italian Systems Society. The title, Systemics of Incompleteness and Quasi-Systems, aims to underline the need for Systemics and Systems Science to concepts of incompleteness and quasiness. Classical models of Systemics are intended to represent complex aspects of phenomena and processes. They consider the phenomena in their temporal and spatial complexity. In these cases, possible incompleteness in the modelling is assumed to have a provisional or practical nature. This is still under study, and because there is no theoretical reason why the modelling cannot be complete. In principle, this is a matter of non-complex phenomena, to be considered using the concepts of the First Systemics. When dealing with emergence, there are phenomena which must be modelled by systems having multiple aspects depending on the aspects being taken into consideration. Here, incompleteness in the modelling is intrinsically and theoretically relating changes in properties, structures, and status of system. Rather than consider the system parametrically changing over time, we consider sequences of systems coherently. We consider the properties and processes for which modelling is incomplete, being related to only some properties, as well as the aspects of such modelling is theoretically incomplete—as in the case of processes of emergence and for approaches to be considered by the Second Systemics. In this regard, we consider here the generic concept of quasi emergence and such incompleteness. The concept of quasi is used in various disciplines including quasi-crystals, quasi-periodicity, quasi-electric fields, and quasi-periodicity. In general, the concept of quasiness for systems concerns continuous structural changes which are always meta-stable, waiting for events to collapse over other configurations and possible forms of stability; whose equivalence depends on the type of phenomenon under study. Interest in the concept of quasiness is not related to its meaning of rough approximation, but it indicates an incompleteness which is structurally sufficient to accommodate processes of emergence and coherence or generate new, equivalent or non-equivalent, levels. The conference was devoted to identifying, discussing and understanding possible interrelationships of theoretical disciplinary improvements, reconstructions having prospective fundamental roles for a new Quasi-Systemics. The latter should be able to deal with complexity related to complexity in more general and realistic ways, when a system is not always a system and not the same system. In this context, the inter-disciplinarity should consist, for instance, of a constructionist, non-ideological, multiple, contradiction-tolerant, Systemics, always in progress, and in its turn, emergence.

Constraints and Possibilities Masuro Ceruti 1994 Originally published in the Italian, Constraints and Possibilities has caused a considerable stir in Europe and has already been translated into several languages. What noted cyberneticist Heinz von Foerster called a stroke of genius, Ceruti applies a new perspective to our understanding of evolution, and startlingly outlines how the evolution of our knowledge and our knowledge of evolution have in fact been mirror images of each other. Expanding on the intellectual tradition of Gregory Bateson, Ervin Laszlo, Stephen Jay Gould, and Niles Eldredge, Ceruti's work is a testament to the paradigm shifts occurring in science today. Indispensable reading for anyone interested in the evolution of our conceptual knowledge.

English - One Tongue, Many Voices Jaes Svartvik 2016-01-19 This is the fully revised and expanded second edition of English - One Tongue, Many Voices, a book by three internationally distinguished English language scholars who tell the fascinating, improbable saga of English in time and space. Chapters trace the history of the language from its obscure beginnings over 1500 years ago as a collection of dialects spoken by many small, illiterate tribes. They show how the geographical spread of the language in its increasing diversity has transformed English into an international language of unprecedented range and variety. The authors examine the problems of English as a global language and the problems, pressures and uncertainties of its future, online and offline. They argue that, in spite of the amazing variety and plurality of English, it remains a single language.

The Years of Alienation in Italy Alessandra Diazi 2019-06-11 The Years of Alienation in Italy offers an interdisciplinary overview of the socio-political, psychological, philosophical, and cultural meanings that the notion of alienation took on in Italy between the 1960s and the 1970s. It addresses alienation as a social condition of estrangement caused by the capitalist system, a pathological state of the mind and an ontological condition of subjectivity. Contributors to the edited volume explore the pervasive influence this multifaceted concept had on literature, cinema, architecture, and photography in Italy. The collection also theoretically reassesses the notion of alienation from a novel perspective, employing Italy as a paradigmatic case study of its pioneering role in the revolution of mental health care and factory work during these two decades.

Mission of the University Jose Ortega y Gasset 2014-09-25 In 1930, the great Spanish philosopher Jose Ortega y Gasset set forth a program for reforming the modern Spanish university. Aware that the missions of the university are many and often competing, Ortega built his program around a conception of a "general culture" that transcended national boundaries or time limits and could fit into any national system of higher education. His ideas are especially pertinent to contemporary debate in America over curriculum development and the purpose of higher education. In this volume Ortega sought to answer two essential questions: what is the knowledge that should be known by all students and what is the function of the university in a modern democracy? Basing his program on his own deep personal culture and an extensive knowledge of the various European university systems, he defined four primary missions: the teaching of the learned professions, the fostering of scientific research, the training for political leadership, and finally the creation of cultured persons with the ability to make informed interpretations of the world. Ortega's understanding of "general culture" is set out in great detail here.

Examining Reading Jnanan Khalifa 2009-08-27 This publication highlights the need for test developers to provide clear explanations of the ability constructs which underpin tests offered in the public domain. explanation is increasingly required or if the validity of test score interpretation and use are to be supported logically and with empirical evidence. The book demonstrates the application of a comprehensive test framework which adopts a socio-cognitive perspective. The framework embraces six core components which reflect the practical nature and quality of an actual testing event. It examines Cambridge ESOL writing tests from the following perspectives: Test Taker, Cognitive Validity, Context Validity, Scoring Validity, Criterion-related Validity and Consequential Validity. The authors show how an understanding and analysis of the framework and its components in relation to specific writing tests can assist test developers to operationalise their tests more effectively, especially in relation to criterial distinctions across test levels.

Computational Science and Its Applications - ICCSA 2014 SA 2014 Murgante 2014-07-02 The six-volume set LNCS 8579-8584 constitutes the refereed proceedings of the 14th International Conference on Computational Science and Its Applications, ICCSA 2014, held in Guimarães, Portugal, in June/July 2014. The 347 revised papers presented in 30 workshops and a special track were carefully reviewed and selected from 1166 papers presented in the workshops cover various areas in computational science ranging from computational science technologies to specific areas of computational science such as computational geometry and Mechanical Properties of Bamboo J.A. Janssen 2012-12-06 In this book I have collected many reports on the properties of bamboo. Since I started bamboo research in 1974, I have collected many publications on bamboo. However, in contacts with other researchers I became aware of the fact that several of these were unknown to them. Consequently their activities in research or in bamboo projects had to start at a lower level than if they had known some of these publications. Therefore, I discussed the need for a book like this with several colleagues, and I decided to start writing. In this book I present data on properties, as published by other researchers. Certainly it is not complete; e.g. the proceedings of the bamboo workshop in Cochin in November 2012 are not included; they arrived just too late to be taken into account. On the other hand, in writing this preface I realize I have forgotten my own thesis. I do apologize to any colleague whose relevant report is not taken into account as well. I like to express my feelings of respect to the board of my faculty: they allowed me to spend much time on this book, and they gave a considerable financial support for the printing costs.

Active Social Policies in the EU Van Berkel 2002 The general objective of this book is to contribute to the debate on, as well as to the development and implementation of, EU social policies and social policies in other countries, particularly the growing emphasis in these policies on "activation" and "participation" rather than income provision.

Anisotropic Behaviour of Damaged Materials J. Skrzypek 2012-11-27 The scope of this book is based on the keynote lectures delivered during the International Symposium on Anisotropic Behaviour of Damaged Materials ABDM, held in Krakow-Przegorzay, Poland, September 9-11, 2002. The Symposium was organized by the Solid Mechanics Division of the Institute of Mechanics and Machine Design - Cracow University of Technology, under auspices of the Dean of the Faculty of Mechanical Engineering, Cracow University of Technology, Prof. S. Michalowski. The Co-organizers of the ABDM Symposium were: • Martin-Luther-Universität Halle-Wittenberg, • Centre of Excellence for Advanced Materials and Structures AMAS at the Institute of Fundamental Technological Research of the Polish Academy of Sciences, Warsaw, • Committee on Mechanics of the Polish Academy of Sciences, Warsaw. Ten chapters of this book in their present form exceed lectures delivered at the Symposium. They should rather be read as not only author's recent work in the field, but also the state of art and synthesis done by the leaders in the mechanics community. The formula of the Symposium, namely: the invited lectures and presentations of the original papers by the participants was used. 23 original papers, published in the Symposium Proceedings on CD, exhaust the content of the ABDM Symposium. The present book provides a survey of various damage models focusing on the response in anisotropic materials as well as damage-induced anisotropy.

Doing Work Based Research Carol Costley 2010-03-25 With the growth of practitioner research, this book shows the way by addressing key issues faced by 'insider researchers' – those doing research projects in the organizations and communities in which they themselves work, or where they are already familiar with the setting. The authors explore the implications of these research contexts, and discuss approaches and methodologies that researchers in these contexts might adopt, with a particular focus on ethics - one of the major concerns for students undertaking a research project of this type.

Building Community in Schools Thomas J. Sergiovanni 1999-09-17 "Sergiovanni documents cases of schools that have successfully reinvented themselves in order to establish a sense of 'community' as the foundation for curriculum and instruction decisions. . . . Teachers, administrators, teacher educators, and communities seeking advice and motivation for restructuring schools for the 21st century would be well advised to consult this book. --Choice "Provides the practitioner with both a theoretical blueprint with which to build learning communities and a rich supply of benchmark illustrations to use as prototypes. . . . thought-provoking and challenging. --NASSP Bulletin Both in and out of schools, people are experiencing a loss of community. In this book, Thomas J. Sergiovanni explains why a sense of community is so vital to the success of any school and shows how parents, teachers, and administrators what they can do to rebuild it. Filled with case studies and other school examples, Building Community in Schools provides the necessary intellectual framework for understanding the need to create communities that are inclusive, meaningful, and democratic.

Macroeconomics William Mitchell 2019-02-08 This groundbreaking new core textbook encourages students to take a more critical approach to the prevalent assumptions around the subject of macroeconomics, by contrasting heterodox and orthodox approaches to theory and policy. The first such textbook to offer a heterodox model from the ground up, it is based on the principles of Modern Monetary Theory (MMT) and draws from the theories of Keynes, Kalecki, Veblen, Marx, and Minsky, amongst others. The internationally-renowned author team offer appropriate fiscal and monetary policy recommendations, explaining how the poor economic performance of most of the wealthy capitalist countries over recent decades could have been avoided by delivering a well-reasoned practical and philosophical argument for the heterodox MMT approach being advocated. The book is suitable for both introductory and intermediate courses, offering a thorough overview of the basics and valuable historical context, while covering everything needed for more advanced courses. The more technical, mathematical material in chapter appendices, offers greater flexibility of use.

The Battle for Welfare Rights Patricia Ann Kornbluh 2007 "This is the most sophisticated study of welfare rights organizing to date. It engages with grassroots and high politics, social history and social thought. . . . While other books focus on ideas, structures, movement history, or poor women, Kornbluh does it all with insight and verve."--Eileen Boris, University of California, Santa Barbara
