Super Villain Dad R. Ross 2015-05-22 You're probably wondering why we're trying to be so quiet. Well there's a reason. A really BIG reason. He's standing over there--no--to your right--no, THROUGH the fence. Yes, on the other side of the big, nasty looking security fence that is literally shaking because of electric jolts. Yes, him. He's pretty scary looking, right? He's got to be six five, and he's got the face of a serial murderer. It's all sharp and needing shaved. And that whole skin tight prison body suit thing--it's really not fashionable at all, I admit. What? Why's he got a streak of white in his hair? Well, see, that's why we're here. He's a super villain. So why is an innocent little freshman like me and her annoying twin brother sneaking peeks at him through a prison fence? Well... He's our father. At least, that's what we think.

Cobra Killer Andrew E. Stoner 2015-11-06 In *Cobra Killer*, authors Andrew E. Stoner and Peter A. Conway tell for the first time in full detail the twisted story of a pair of young, aspiring gay adult film producers whose quest for fame at any cost leads to the gruesome murder of the man who stands in their way, gay porn entrepreneur Bryan Kocis. News of the killing of the forty-four-year-old (stabbed twenty-eight times, his throat slashed to near decapitation) in his suburban home sends shock waves through the bucolic Pennsylvania town. Neighbors were horrified to hear about the murder but equally astonished to learn that Kocis ran a small but thriving online porn operation from his home. The murder investigation leads police and prosecutors to the far reaches of the country, from Virginia to New York City, to Las Vegas, and ultimately to a nude beach in San Diego, where investigators facilitate an incredible clandestine suspect surveillance. The manhunt nets Harlow Cuadra and his lover Joseph Kerekes, both former military men, turned male models, turned hustlers, turned porn producers, who finally land at the bottom of a deadly conspiracy. *Cobra Killer* takes readers into the sometimes alluring, sometimes dangerous and often surprising world of gay porn and the deceit, schemes, and ultimate betrayals lying underneath the fantasy.

The Best of the Hack Mechanic Rob Siegel 2021-05-21 In 1986, after owning eleven BMWs in three years, Rob Siegel sent an unsolicited article to Roundel, the magazine of the BMW Car Club of America. Little did he know that it would kick off 35 years of do-it-yourself automotive writing, and that his monthly column *The Hack Mechanic?* would attract a community of like-minded enthusiasts who, like Rob, try to come up with creative workarounds to keep their cars running without taking them to the dealer every time they hiccup. More than just "use 10mm wrench on bolt B" instructions, though, the columns have always been small journeys into passion and problem solving, philosophy lessons disguised as a repair articles, and short stories about getting into and hopefully out of automotive trouble. *The Best Of The Hack Mechanic?* is a selection of these pieces, including ones on how to buy a vintage BMW and not get burned, the most creative way possible to lock your keys in a running car, why car folks will do just about anything to avoid buying a family minivan when the money obviously would be so much better spent on "something fun," why a car nut really does need seven cars, why the odds of having a car start is often inversely proportion to the number of cars in the driveway, why finding one of his father's tools is enough to make Rob cry, and why working on your car feels so damned good, all written in Rob's Hack Mechanic voice that hovers somewhere between J.D. Salinger, Bill Bryson, and David Sedaris. Informative, irreverent, and poignant, *The Best Of The Hack Mechanic?* will have you hoping Rob has another 35 years of columns in him.

A Very Punchable Face Colin Jost 2020 "Saturday Night Live head writer and Weekend Update co-anchor, Colin Jost, has six sets of stitches on his face alone. He's been punched in at least four different sketches on Saturday Night Live, including once by his boss, Lorne Michaels. But if there's one trait that makes someone well suited to comedy, it's being able to take a punch-metaphorically and, occasionally, physically. From growing up as an overweight kid in a family of firefighters on Staten Island to commuting three hours a day to high school and "seeing the sights" (like watching a Russian woman throw a stroller off the back of a ferry) to attending Harvard while Facebook was created (and choosing comedy instead!), Colin shares how he has navigated the world like a "slightly smarter Forrest Gump." You'll also discover things about Colin that will surprise and confuse you. You'll go behind the scenes at SNL (where he's written some of the most iconic sketches and characters of the past fifteen years) and Weekend Update (where's he's been "the white guy next to Leslie Jones.") And you'll experience the life of a touring stand-up comedian-from performing in rural cafeterias at noon to opening for Dave Chappelle at Radio City Music Hall. For every accomplishment (hosting the Emmys), there is a setback (hosting the Emmys). And for every absurd moment (watching paramedics give CPR to a raccoon), there is an honest, emotional one (recounting his mother's experience on the scene of the Twin Towers' collapse on 9/11.) *A Very Punchable Face* reveals the brilliant mind behind some of the dumbest sketches on television and lays bare the heart and humor of a hardworking guy-with a face you can't help but want to punch."--

A Higher-Dimensional Sieve Method Harold G. Diamond 2008-10-16 Nearly a hundred years have passed since Viggo Brun invented his famous sieve, and the use of sieve methods is constantly evolving. As probability and combinatorics have penetrated the fabric of mathematical activity, sieve methods have become more versatile and sophisticated and in recent years have played a part in some of the most spectacular mathematical discoveries. Many arithmetical investigations encounter a combinatorial problem that requires a sieving argument, and this tract offers a modern and reliable guide in such situations. The theory of higher dimensional sieves is thoroughly explored, and examples are provided throughout. A Mathematica® software package for sieve-theoretical calculations is provided on the authors' website. To further benefit readers, the Appendix describes methods for computing sieve functions. These methods are generally applicable to the computation of other functions used in analytic number theory. The appendix also illustrates features of Mathematica® which aid in the computation of such functions.

Syntactic Theory Ivan A. Sag 2003 This second edition of *Syntactic Theory: A Formal Introduction* expands and improves upon a truly unique introductory syntax textbook. Like the first edition, its focus is on the development of precisely formulated grammars whose empirical predictions can be directly tested. There is also considerable emphasis on the prediction and evaluation of grammatical hypotheses, as well as on integrating syntactic hypotheses with matters of semantic analysis. The book covers the core areas of English syntax from the last quarter century, including complementation, control, "raising constructions," passives, the auxiliary system, and the analysis of long distance dependency constructions. *Syntactic Theory's* step-by-step introduction to a consistent grammar in these core areas is complemented by extensive problem sets drawing from a variety of languages. The book's theoretical perspective is presented in the context of current models of language processing, and the practical value of the constraint-based, lexicalist grammatical architecture proposed has already been demonstrated in computer language processing applications. This thoroughly reworked second edition includes revised and extended problem sets, updated analyses, additional examples, and more detailed exposition throughout. Praise for the first edition: "Syntactic Theory sets a new standard for introductory syntax volumes that all future books should be measured against."—Gert Webelhuth, *Journal of Linguistics*

Mini Down Under Donn Anderson 2009-03-02 *Mini Down Under* traces the history of one of New Zealand's - and the world's - best-loved cars. More versions of the Mini were available in New Zealand than anywhere else, and the launching of the iconic car in February 1960 was a larger-than-life event. In this lively and personal story, the author tracks the Mini's life in New Zealand, the connection between Kiwi racing driver Bruce McLaren and the birth of the Mini Cooper, the heady days of competition success in the Antipodes, the local assembly and marketing of the classic original car and the eventual development into the latest generation Mini for a new century.

Effectiveness and Impact of Corporate Average Fuel Economy (CAFE) Standards National Research Council 2002-01-29 Since CAFE standards were established 25 years ago, there have been significant changes in motor vehicle technology, globalization of the industry, the mix and characteristics of vehicle sales, production capacity, and other factors. This volume evaluates the implications of these changes as well as changes anticipated in the next few years, on the need for CAFE, as well as the stringency and/or structure of the CAFE program in future years.

Blade-Mounted Trailing Edge Flap Control for Bvi Noise Reduction National Aeronautics and Space Administration (NASA) 2018-07-23 Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of parallel airfoil-vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate that the trailing edge flap can be used to alleviate the impulsive loads experienced by the airfoil. For supercritical interactions, the results show the necessity of using a leading edge flap, rather than a trailing edge flap, to alleviate the interaction. Results for various time dependent flap motions and their effect on the predicted temporal sectional loads, differential pressures, and the free vortex trajectories are presented. For the OLS model rotor, contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s). Average reductions in the BVI noise levels on the order of 5 dB with moderate power penalties on the order of 18 pct. for a four bladed rotor and 58 pct. for a two bladed rotor were obtained.
