Rogue Economics Loretta Napoleoni 2011-01-04 What do Eastern Europe's booming sex trade, America's subprime mortgage lending scandal, China's fake goods industry, and celebrity philanthropy in Africa have in common? With biopirates trolling the blood industry, fish-farming bandits ravaging the high seas, pornography developing virtually in *Second Life*, and games like *World of Warcraft* spawning online sweatshops, how are rogue industries transmuting into global empires? And will the entire system be transformed by the advent of sharia economics? With the precision of an economist and the narrative deftness of a storyteller, syndicated journalist Loretta Napoleoni examines how the world is being reshaped by dark economic forces, creating victims out of millions of ordinary people whose lives have become trapped inside a fantasy world of consumerism. Napoleoni reveals the architecture of our world, and in doing so provides fresh insight into many of the most insoluble problems of our era.

*Darwin's Gift to Science and Religion Francisco J. Ayala 2007-05-23 With the publication in 1859 of *On the Origin of Species by Means of Natural Selection*, Charles Darwin established evolution by common descent as the dominant scientific explanation for nature's diversity. This was to be his gift to science and society; at last, we had an explanation for how life came to be on Earth. Scientists agree that the evolutionary origin of animals and plants is a scientific conclusion beyond reasonable doubt. They place it beside such established concepts as the roundness of the earth, its revolution around the sun, and the molecular composition of matter. That evolution has occurred, in other words, is a fact. Yet as we approach the bicentennial celebration of Darwin's birth, the world finds itself divided over the truth of evolutionary theory. Consistently endorsed as "good science" by experts and overwhelmingly accepted as fact by the scientific community, it is not always accepted by the public, and our schools continue to be battlegrounds for this conflict. From the Tennessee trial of a biology teacher who dared to teach Darwin's theory to his students in 1925 to Tammy Kitzmiller's 2005 battle to keep intelligent design out of the Dover district schools in Pennsylvania, it's clear that we need to cut through the propaganda to quell the cacophony of raging debate. With the publication of *Darwin's Gift*, a voice at once fresh and familiar brings a rational, measured perspective to the science of evolution. An acclaimed evolutionary biologist with a background in theology, Francisco Ayala offers clear explanations of the science, reviews the history that led us to ratify Darwin's theories, and ultimately provides a clear path for a confused and conflicted public.*

Arts and Humanities in Progress Dario Martinelli 2016-10-13 The book aims to introduce a research concept called "Numanities", as one possible attempt to overcome the current scientific, social and institutional crisis of the humanities. Such crisis involves their impact on, and role within, society; their popularity among students and scholars; and their identity as producers and promoters of knowledge. The modern western world and its economic policies have been identified as the strongest cause of such a crisis. Creating the conditions for, but in fact encouraging it. However, a self-critical assessment of the situation is called for. Our primary fault as humanists was that of stubbornly thinking that the world's changes could never really affect us, as - we felt - our identity was sacred. In the light of these approaches, the main strengths of humanities have been identified in the ability to: promote critical thinking and analytical reasoning; provide knowledge and understanding of democracy and social justice; develop leadership, cultural and ethical values. The main problems of humanities are the lack economic relevance; the socio-institutional perception of them as "impractical" and unemployable; the fact that they do not match with technological development. Finally, the resulting crisis consists mainly in the absence (or radical reduction) of funding from institutions; a decrease in student numbers a decrease in interest; a loss of centrality in society. A Numanities (New Humanities) project should consider all these aspects, with self-critical assessment on the first line. The goal is to unify the various fields, approaches and also potentials of the humanities in the context, dynamics and problems of current societies, and in an attempt to overcome the above-described crisis. Numanities are introduced not as a theoretical paradigm, but in terms of an "umbrella-concept" that has no specific scientific content in it: that particularly means that the many existing new fields and research trends that are addressing the same problems (post-humanism, transhumanism, transformational humanities, etc.) are not competitors of Numanities, but rather possible ways to them. Therefore, more than a theoretical program, Numanities intend to pursue a mission, and that is summarized in a seven-point manifesto. In the light of these premises and reflections, the book then proceeds to identify the areas of inquiry that Numanities, in their functions and comprehensive approach, seek to cover. The following list should also be understood as a statement of purposes for this entire book series. These, in other words, will be the topics/areas we intend to represent. Once elaborated on the foundations of Numanities, the book features a second part that presents two case studies based on two relatively recent (and now updated) investigations that the author has performed in the fields of musical and animal studies respectively. The two cases (and relative areas of inquiry) were selected because they were considered particularly relevant within the discussion of Numanities, and in two different ways. In the first case-study the author discussed the most typical result (or perhaps cause?) of the technophobic attitude that was addressed in the first part of the book: the issue of "authenticity", as applied, in the author's particular study, to popular music. In the second case-study, he analyzes two different forms of comparative analysis between human and non-human cognition: like in the former case, this study, too, is aimed at a critical commentary on (what the author considers) redundant biases in current humanistic research - anthropocentrism and speciesism.

From Good Goddess to Vestal Virgins Ariadne Staples 2013-02-01 The role of women in Roman culture and society was a paradoxical one. On the one hand they enjoyed social, material and financial independence and on the other hand they were denied basic constitutional rights. Roman history is not short of powerful female figures, such as Agrippina and Livia, yet their power stemmed from their associations with great men and was not officially recognised. Ariadne Staples' book examines how women in Rome were perceived both by themselves and by men through women's participation in Roman religion, as Roman religious ritual provided the single public arena where women played a significant formal role. *From Good Goddess to Vestal Virgins* argues that the ritual roles played out by women were vital in defining them sexually and that these sexually defined categories spilled over into other aspects of Roman culture, including political activity. Ariadne Staples provides an arresting and original analysis of the role of women in Roman society, which challenges traditionally held views and provokes further questions.

The Forgotten Revolution Lucio Russo 2013-12-01 The period from the late fourth to the late second century B. C. witnessed, in Greek-speaking countries, an explosion of objective knowledge about the external world. While Greek culture had reached great heights in art, literature and philosophy already in the earlier classical era, it is in the so-called Hellenistic period that we see for the first time — anywhere in the world — the appearance of science as we understand it now: not an accumulation of facts or philosophically based speculations, but an organized effort to model nature and apply such models, or scientific theories in a sense we will make precise, to the solution of practical problems and to a growing understanding of nature. We owe this new approach to scientists such as Archimedes, Euclid, Eratosthenes and many others less familiar today but no less remarkable. Yet, not long after this golden period, much of this extraordinary development had been reversed. Rome borrowed what it was capable of from the Greeks and kept it for a little while yet, but created very little science of its own. Europe was soon smothered in the obscurantism and stasis that blocked most avenues of intellectual development for a thousand years — until, as is well known, the rediscovery of ancient culture in its fullness paved the way to the modern age.

The Breakfast Book Andrew Dalby 2013-06-01 You've heard it from doctors, nutritionists, and your mom: breakfast is the most important meal of the day. It's also one of the most diverse, varying greatly from family to family and region to region, even while individuals tend to eat the same thing every day. While Americans traditionally like to chow down on eggs, cereal, and doughnuts, the Japanese eat rice and miso soup, and New Zealanders enjoy porridge. But while we know bacon and sausage links belong alongside pancakes and waffles in the early morning hours, we don't know how breakfast came to be. Taking a multifaceted approach to the story of the morning meal, *The Breakfast Book* collects narratives of breakfast in an attempt to pin down the mottled history of eating in the A.M. In search of what people have thought and written—and tasted—about breakfast, Andrew Dalby traces the meal's origins back to the Neolithic revolution. He follows the trail of toast crumbs from the ancient Near East and classical Greece to modern Europe and across the globe, rediscovering stories of breakfast in three thousand years of fiction, memoirs, and art. Using a multitude of entertaining breakfast facts, anecdotes, and images, he reveals why breakfast is so often the backdrop for unexpected meetings, why so many people eat breakfast out, and why this often silent meal is also so reassuring. Featuring a selection of historic and contemporary breakfast recipes from around the world, *The Breakfast Book* is the first book to explore the history of this inimitable meal and will make an ideal morning companion to crumpets, deviled kidneys, and spanakopita alike.

Eating and Healing Andrea Pieroni 2006-03-15 Discover neglected wild food sources—that can also be used as medicine! The long-standing notion of “food as medicine, medicine as food,” can be traced back to Hippocrates. *Eating and Healing: Traditional Food As Medicine* is a global overview of wild and semi-domesticated foods and their use as medicine in traditional societies. Important cultural information, along with extensive case studies, provides a clear, authoritative look at the many neglected food sources still being used around the world today. Comparisons of living conditions in different geographic areas as well as differences in diet and medicines are thoroughly discussed and empirically evaluated to provide scientific evidence of the many uses of these traditional foods as medicine and as functional foods. The case studies focus on the uses of plants, seaweed, mushrooms, and fish within their cultural contexts while showing the dietary and medical importance of these foods. The book provides comprehensive tables, extensive references, useful photographs, and helpful illustrations to provide clear scientific support as well as opportunities for further thought and study. *Eating and Healing: Traditional Food As Medicine* explores the ethnobiology of: Tibet—antioxidants as mediators of high-altitude nutritional physiology Northeast Thailand—“wild” food plant gathering Southern Italy—the consumption of wild plants by Albanians and Italians Northern Spain—medicinal digestive beverages United States—medicinal herb quality

Obsolete Objects in the Literary Imagination Francesco Orlando 2008-10-01 Translated here into English for the first time is a monumental work of literary history and criticism comparable in scope and achievement to Eric Auerbach's *Mimesis*. Italian critic Francesco Orlando explores Western literature's obsession with outmoded and nonfunctional objects (ruins, obsolete machinery, broken things, trash, etc.). Combining the insights of psychoanalysis and literary-political history, Orlando traces this obsession to a turning point in history, at the end of eighteenth-century industrialization, when the functional becomes the dominant value of Western culture. Roaming through every genre and much of the history of Western literature, the author identifies distinct categories into which obsolete images can be classified and provides myriad examples. The function of literature, he concludes, is to remind us of what we have lost and what we are losing as we rush toward the future.

The Body Where I was Born Guadalupe Nettel 2015-06-16 The first novel to appear in English by one of the most talked-about and critically acclaimed writers of new Mexican fiction. From a psychoanalyst's couch, the narrator looks back on her bizarre childhood—in which she was born with an abnormality in her eye into a family intent on fixing it. In a world without the time and space for innocence, the narrator intimately recalls her younger self—a fierce and discerning girl open to life's pleasures and keen to its ruthless cycle of tragedy. With raw language and a brilliant sense of humor, both delicate and unafraid, Nettel strings together hard-won, unwieldy memories—taking us from Mexico City to Aix-en-Provence, France, then back home again—to create a portrait of the artist as a young girl. In these pages, Nettel's art of storytelling transforms experience into inspiration and a new startling perception of reality. "Nettel's eye...gives rise to a tension, subtle but persistent, that immerses us in an uncomfortable reality, disquieting, even disturbing—a gaze that illuminates her prose like an alien sun shining down on our world." —Valeria Luiselli, author of *Sidewalks and Faces in the Crowd* "It has been a long time since I've found in the literature of my generation a world as personal and untransferable as that of Guadalupe Nettel." —Juan Gabriel Vásquez, author of *The Sound of Things Falling* "Nettel reveals the subliminal beauty within beings...and painstakingly examines the intimacies of her soul." —Magazine *Littéraire* "Guadalupe Nettel's storytelling power is majestic." —*Typographical Era* In Praise of Natural Histories "Five flawless stories..." —*The New York Times* "Nettel's stories are as atmospheric and emotionally battering as Chekhov's." —*Asymptote*
