**Perspectives on Human-animal Communication** Emily Plec 2013 This book represents early and prominent forays into the subject of human-animal communication from a Communication Studies perspective, an effort that brings a discipline too long defined by that fallacy of division, human or nonhuman, into conversation with animal studies, biosemiotics, and environmental communication, as well as other recent intellectual and activist movements for reconceptualizing relationships and interactions in the biosphere.

**The Routledge Handbook of Shakespeare and Animals** Karen Raber 2020-08-11 Shakespeare's plays have a long and varied performance history. The relevance of his plays in literary studies cannot be understated, but only recently have scholars been looking into the presence and significance of animals within the canon. Readers will quickly find—without having to do extensive research—that the plays are teeming with animals! In this Handbook, Karen Raber and Holly Dugan delve deep into Shakespeare's world to illuminate and understand the use of animals in his span of work. This volume supplies a valuable resource, offering a broad and thorough grounding in the many ways animal references and the appearance of actual animals in the plays can be interpreted. It provides a thorough overview; demonstrates rigorous, original research; and charts new frontiers in the field through a broad variety of contributions from an international group of well-known and respected scholars.

**The Imaginary of Animals** Annabelle Dufourcq 2021-07-29 This book explores the phenomenon of animal imagination and its profound power over the human imagination. It examines the structural and ethical role that the human imagination must play to provide an interface between humans' subjectivity and the real cognitive capacities of animals. The book offers a systematic study of the increasing importance of the metaphors, the virtual, and figures in contemporary animal studies. It explores human-animal and real-imaginary dichotomies, revealing them to be the source of oppressive cultural structures. Through an analysis of creative, playful and theatrical enactments and mimicry of animal behaviors and communication, the book establishes that human imagination is based on animal imagination. This helps redefine our traditional knowledge about animals and presents new practices and ethical concerns in regard to the animals. The book strongly contends that allowing imagination to play a role in our relation to animals will lead to the development of a more empathetic approach towards them. Drawing on works in phenomenology, contemporary animal philosophy, as well as ethological evidence and biosemiotics, this book is the first to rethink the traditional philosophical concepts of imagination, images, the imaginary, and reality in the light of a zoocentric perspective. It will appeal to philosophers, scholars and students in the field of animal studies, as well as anyone interested in human and non-human imaginations.

**Animal Studies** Matthew R. Calarco 2020-09-29 Prefaced with a brief introduction to the field of animal studies, the text explores the key influential terms, topics and debates which have had a major impact on the field, and that students are most likely to encounter in their animal studies classes. Animal Studies provides a guide to key concepts in the burgeoning interdisciplinary field of animal studies, laid out in A-Z format. While Human-Animal Studies and Critical Animal Studies are the main frameworks that inform the bulk of the writings in animal studies and the key concepts discussed in the volume, other approaches such as anthropology and cognitive ethology are also explored. The entries in the volume attend to the differences in ongoing debates among scholars and activists, showing that what is commonly called "animal studies" is far from a unified body of work. A full bibliography of sources is included at the end of the book, along with an extensive index. The book will be a valuable guide to undergraduate and postgraduate students in geography, philosophy, sociology, anthropology, women's studies, and other related disciplines. Seasoned researchers will find the book helpful, when researching topics outside of their specialization. Outside of academia, it will be of interest to activists, as well as professional organizations.

**Routledge Handbook of Ecocultural Identity** Tema Milstein 2020-05-01 The Routledge Handbook of Ecocultural Identity brings the ecological turn to sociocultural understandings of self. The editors introduce a broad, insightful assembly of original theory and research on planetary positionalities in flux in the Anthropocene – or what in this Handbook cultural ecologist David Abram presciently renames the Humilocene, a new "epoch of humility." Forty international authors craft a kaleidoscopic lens, focusing on the following key interdisciplinary inquiries: Part I illuminates identity as always ecocultural, expanding dominant understandings of who we are and how our ways of identifying engender earthly outcomes. Part II examines ways ecocultural identities are fostered and how difference and spaces of interaction can be sources of environmental conviviality. Part III illustrates consequential ways the media sphere informs, challenges, and amplifies particular ecocultural identities. Part IV delves into the constitutive power of ecocultural identities and illuminates ways ecological forces shape the political sphere. Part V demonstrates multiple and unspooling ways in which ecocultural identities can evolve and transform to recall ways forward to reciprocal surviving and thriving. The Routledge Handbook of Ecocultural Identity provides an essential resource for scholars, teachers, students, protectors, and practitioners interested in ecological and sociocultural regeneration. The Routledge Handbook of Ecocultural Identity has been awarded the 2020 Book Award from the National Communication Association's (USA) Environmental Communication Division.

**The Rise of Critical Animal Studies** Nik Taylor 2014-04-16 As the scholarly and interdisciplinary study of human/animal relations becomes crucial to the urgent questions of our time, notably in relation to environmental crisis, this collection explores the inner tensions within the relatively new and broad field of animal studies. This provides a platform for the latest critical thinking on the condition and experience of animals. The volume is structured around four sections: engaging theory doing critical animal studies critical animal studies and anti-capitalism contesting the human, liberating the animal: veganism and activism. The Rise of Critical Animal Studies demonstrates the centrality of the contribution of critical animal studies to vitally important contemporary debates and considers future directions for the field. This edited collection will be useful for students and scholars of sociology, gender studies, psychology, geography, and social work.

**Why We Love and Exploit Animals** Kristof Dhont 2019-12-12 This unique book brings together research and theorizing on human-animal relations, animal advocacy, and the factors underlying exploitative attitudes and behaviors towards animals. Why do we both love and exploit animals? Assembling some of the world's leading academics and with insights and experiences gleaned from those on the front lines of animal advocacy, this pioneering collection breaks new ground, synthesizing scientific perspectives and empirical findings. The authors show the complexities and paradoxes in human-animal relations and reveal the factors shaping compassionate versus exploitative attitudes and behaviors towards animals. Exploring topical issues such as meat consumption, intensive farming, speciesism, and effective animal advocacy, this book demonstrates how we both value and devalue animals, how we can address animal suffering, and how our thinking about animals is connected to our thinking about human intergroup relations and the dehumanization of human groups. This is essential reading for students, scholars, and professionals in the social and behavioral sciences interested in human-animal relations, and will also strongly appeal to members of animal rights organizations, animal rights advocates, policy makers, and charity workers.

**Routledge Handbook of Human-animal Studies** Garry Marvin 2014 Human-animal studies is an academic field that has grown exponentially over the past decade. It explores the whys, hows, and whats of human-animal relations: why animals are represented and configured in different ways in human cultures and societies around the world; how they are imagined, experienced, and given significance; what these relationships might signify about being human; and what about these relationships might be improved for the sake of the individuals as well as the communities concerned. The Routledge Handbook of Human-Animal Studies presents a collection of original essays from artists and scholars who have established themselves internationally on the basis of specific and significant new contributions to human-animal studies. This international, interdisciplinary handbook will be of interest to students and scholars of human-animal studies, sociology, anthropology, biology, environmental studies, geography, cultural studies, history, philosophy, media studies, gender studies, literature, psychology, ethology, and visual studies.

**The Routledge Handbook of Religion and Animal Ethics** Andrew Linzey 2018-09-29 The ethical treatment of non-human animals is an increasingly significant issue, directly affecting how people share the planet with other creatures and visualize themselves within the natural world. The Routledge Handbook of Religion and Animal Ethics is a key reference source in this area, looking specifically at the role religion plays in the formation of ethics around these concerns. Featuring thirty-five chapters by a team of international contributors, the handbook is divided into two parts. The first gives an overview of fifteen of the major world religions' attitudes towards animal ethics and protection. The second features five sections addressing the following topics: Human Interaction with Animals Killing and Exploitation Religious and Secular Law Evil and Theodicy Souls and Afterlife This handbook demonstrates that religious traditions, despite often being anthropocentric, do have much to offer to those seeking a framework for a more enlightened relationship between humans and non-human animals. As such, The Routledge Handbook of Religion and Animal Ethics is essential reading for students and researchers in religious studies, theology, and animal ethics as well as those studying the philosophy of religion and ethics more generally.

**Animals, Anthropomorphism and Mediated Encounters** Claire Parkinson 2019-07-23 This book critically investigates the pervasiveness of anthropomorphised animals in popular culture. Anthropomorphism in popular visual media has long been denounced for being unsophisticated or emotionally manipulative. It is often criticised for over-expressing similarities between humans and other animals. This book focuses on everyday encounters with visual representations of anthropomorphised animals and considers how attributing other animals with humanlike qualities speaks to a complex set of power relations. Through a series of case studies, it explores how anthropomorphism is produced and circulated and proposes that it can serve to create both misunderstandings and empathetic connections between humans and other animals. This book will appeal to academics and students interested in visual media, animal studies, sociology and cultural studies.

**The Routledge Companion to Animal-Human History** Hilda Kean 2018-09-03 The Routledge Companion to Animal-Human History provides an up-to-date guide for the historian working within the growing field of animal-human history. Giving a sense of the diversity and interdisciplinary nature of the field, cutting-edge contributions explore the practices of and challenges posed by historical studies of animals and animal-human relationships. Divided into three parts, the Companion takes both a theoretical and practical approach to a field that is emerging as a prominent area of study. Animals and the Practice of History considers established practices of history, such as political history, public history and cultural memory, and how animal-human history can contribute to them. Problems and Paradigms identifies key historiographical issues to the field with contributors considering the challenges posed by topics such as agency, literature, art and emotional attachment. The final section, Themes and Provocations, looks at larger themes within the history of animal-human relationships in more depth, with contributions covering topics that include breeding, war, hunting and eating. As it is increasingly recognised that nonhuman actors have contributed to the making of history, The Routledge Companion to Animal-Human History provides a timely and important contribution to the scholarship on animal-human history and surrounding debates.

**The Routledge Handbook of Animal Ethics** Bob Fischer 2019-12-06 There isn't one conversation about animal ethics. Instead, there are several important ones that are scattered across many disciplines. This volume both surveys the field of animal ethics and draws professional philosophers, graduate students, and undergraduates more deeply into the discussions that are happening outside of philosophy departments. To that end, the volume contains more nonphilosophers than philosophers, explicitly inviting scholars from other fields—such as animal science, ecology, economics, psychology, law, environmental science, and applied biology, among others—to bring their own disciplinary resources to bear on matters that affect animals. The Routledge Handbook of Animal Ethics is composed of 44 chapters, all appearing in print here for the first time, and organized into the following six sections: I. Thinking About Animals II. Animal Agriculture and Hunting III. Animal Research and Genetic Engineering IV. Companion Animals V. Wild Animals: Conservation, Management, and Ethics VI. Animal Activism The chapters are brief, and they have been written in a way that is accessible to serious undergraduate students, regardless of their field of study. The volume covers everything from animal cognition to the state of current fisheries, from genetic modification to intersectional animal activism. It is a resource designed for anyone interested in the moral issues that emerge from human interactions with animals.

**Routledge Handbook of Biosecurity and Invasive Species** Kezia Barker 2021-05-12 This handbook provides a comprehensive overview of the assessment and management of potentially dangerous infectious diseases, quarantined pests, invasive (alien) species, living modified organisms and biological weapons, from a multitude of perspectives. Issues of biosecurity have gained increasing attention over recent years but have often only been addressed from narrow disciplines and with a lack of integration of theoretical and practical approaches. The Routledge Handbook of Biosecurity and Invasive Species brings together both the natural sciences and the social sciences for a fully rounded perspective on biosecurity, shedding light on current national and international management frameworks with a mind to assessing possible future scenarios. With chapters focussing on a variety of ecosystems – including forests, islands, marine and coastal and agricultural land – as well as from the industrial scale to individual gardens, this handbook reviews the global state of invasions and vulnerabilities across a wide range of themes and critically analyses key threats and threatening activities, such as trade, travel, land development and climate change. Identifying invasive species and management techniques from a regional to international scale, this book will be a key reference text for a wide range of students and academics in ecology, agriculture, geography, human and animal health and interdisciplinary environmental and security studies.

**The Routledge Handbook of Philosophy of Animal Minds** Kristin Andrews 2017-07-06 While philosophers have been interested in animals since ancient times, in the last few decades the subject of animal minds has emerged as a major topic in philosophy. The Routledge Handbook of Philosophy of Animal Minds is an outstanding reference source to the key topics, problems, and debates in this exciting subject and is the first collection of its kind. Comprising nearly fifty chapters by a team of international contributors, the Handbook is divided into eight parts: Mental representation Reasoning and metacognition Consciousness Mindreading Communication Social cognition and culture Association, simplicity, and modeling Ethics. Within these sections, central issues, debates, and problems are examined, including: whether and how animals represent and reason about the world; how animal cognition differs from human cognition; whether animals are conscious; whether animals represent their own mental states or those of others; how animals communicate; the extent to which animals have cultures; how to choose among competing models and explanations of animal behavior; and whether animals are moral agents and/or moral patients. The Routledge Handbook of Philosophy of Animal Minds is essential reading for students and researchers in philosophy of mind, philosophy of psychology, ethics, and related disciplines such as ethology, biology, psychology, linguistics, and anthropology.

**The Routledge Handbook of International Crime and Justice Studies** Bruce Arrigo 2013-08-15 The Routledge Handbook of International Crime and Justice Studies presents the enduring debates and emerging challenges in crime and justice studies from an international and multi-disciplinary perspective. Guided by the pivotal, although vastly under-examined, role that consumerism, politics, technology, and culture assume in shaping these debates and in organizing these challenges, individual chapters probe the global landscape of crime and justice with astonishing clarity and remarkable depth. A distinguished collection of experts examine the interdisciplinary field of international crime and justice. Their contributions are divided into thematic sections, including: theory, culture, and society industries of crime and justice: systems of policing, law, corrections and punishment the criminal enterprise global technologies media, crime, and culture green criminology political violence public health criminology the political economy of crime and justice. All the chapters include full pedagogy and instructional resources for easy referencing or classroom use. This Handbook will be useful for students, scholars and practitioners of law, medicine, history, economics, sociology, politics, philosophy, education, public health, and social policy.

**Routledge Handbook of Gender and Environment** Sherilyn MacGregor 2017-07-14 The Routledge Handbook of Gender and Environment gathers together state-of-the-art theoretical reflections and empirical research from

leading researchers and practitioners working in this transdisciplinary and transnational academic field. Over the course of the book, these contributors provide critical analyses of the gender dimensions of a wide range of timely and challenging topics, from sustainable development and climate change politics, to queer ecology and interspecies ethics in the so-called Anthropocene. Presenting a comprehensive overview of the development of the field from early political critiques of the male domination of women and nature in the 1980s to the sophisticated intersectional and inclusive analyses of the present, the volume is divided into four parts: Part I: Foundations Part II: Approaches Part III: Politics, policy and practice Part IV: Futures. Comprising chapters written by forty contributors with different perspectives and working in a wide range of research contexts around the world, this Handbook will serve as a vital resource for scholars, students, and practitioners in environmental studies, gender studies, human geography, and the environmental humanities and social sciences more broadly.

**Animals, Disease and Human Society** Joanna Swabe 2002-09-11 This book explores the history and nature of our dependency on other animals and the implications of this for human and animal health. Writing from an historical and sociological perspective, Joanna Swabe's work discusses such issues as: "animal domestication" \* the consequences of human exploitation of other animals, including links between human and animal disease \* the rise of a veterinary regime, designed to protect humans and animals alike \* implications of intensive farming practices, pet-keeping and recent biotechnological developments. This account spans a period of some ten thousand years, and raises important questions about the increasing intensification of animal use for both animal and human health.

**Urban Animals** Tora Holmberg 2015-03-27 The city includes opportunities as well as constraints for humans and other animals alike. Urban animals are often subjected to complaints; they transgress geographical, legal and cultural ordering systems, while roaming the city in what is often perceived as uncontrolled ways. But they are also objects of care, conservation practices and bio-political interventions. What then, are the "more-than-human" experiences of living in a city? What does it mean to consider spatial formations and urban politics from the perspective of human/animal relations? This book draws on a number of case studies to explore urban controversies around human/animal relations, in particular companion animals: free ranging dogs, homeless and feral cats, urban animal hoarding and "crazy cat ladies". The book explores "zooicities", the theoretical framework in which animal studies meet urban studies, resulting in a reframing of urban relations and space. Through the expansion of urban theories beyond the human, and the resuscitation of sociological theories through animal studies literature, the book seeks to uncover the phenomenon of "humanimal crowding", both as threats to be policed, and as potentially subversive. In this book, a number of urban controversies and crowding technologies are analysed, finally pointing at alternative modes of trans-species urban politics through the promises of humanimal crowding - of proximity and collective agency. The exclusion of animals may be an urban ideology, aiming at social order, but close attention to the level of practice reveals a much more diverse, disordered, and perhaps disturbing experience.

**Routledge Handbook of Disability Studies** Nick Watson 2013-03-01 The Routledge Handbook of Disability Studies takes a multidisciplinary approach to disability and provides an authoritative and up-to-date overview of the main issues in the field around the world today. Adopting an international perspective and consisting entirely of newly commissioned chapters arranged thematically, it surveys the state of the discipline, examining emerging and cutting edge areas as well as core areas of contention. Divided in five sections, this comprehensive handbook covers: different models and approaches to disability how key impairment groups have engaged with disability studies and the writings within the discipline policy and legislation responses to disability studies and to disability activism disability studies and its interaction with other disciplines, such as history, philosophy and science and technology studies disability studies and different life experiences, examining how disability and disability studies intersects with ethnicity, sexuality, gender, childhood and ageing. Containing chapters from an international selection of leading scholars, this authoritative handbook is an invaluable reference for all academics, researchers and more advanced students in disability studies and associated disciplines such as sociology, health studies and social work.

**Animal Ethics and Theology** Daniel Miller 2013-03-01 In this book, Daniel K. Miller articulates a new vision of human and animal relationships based on the foundational love ethic within Christianity. Framed around Jesus' parable of the Good Samaritan, Animal Ethics and Theology thoughtfully examines the shortcomings of utilitarian and rights-based approaches to animal ethics. By considering the question of animals within the Christian concept of neighbourly love, Miller provides an alternative narrative for understanding the complex relationships that humans have with other animals. This book addresses significant theological questions such as: Does being created in the image of God present a meaningful distinction between humans and other animals? What does it mean for humans to have dominion (Gen. 1:28) over animals? Is meat eating a moral problem for Christians? In addition to drawing out the significance of Christian theology for field of animal ethics this book also engages environmental and feminist ethics. Miller brings a theological perspective to such questions as: Should care for animals be distinguished from care for the environment, and what role should human emotions play in our ethical dealings with other animals? As the title suggests, this book provides fresh insight into the theological significance of human relationships with other animals.

**Routledge Handbook of Human-Animal Studies** Garry Marvin 2014-04-16 The Routledge Handbook of Human-Animal Studies presents a collection of original essays from artists and scholars who have established themselves internationally on the basis of specific and significant new contributions to human-animal studies. It offers a broad interpretive account of the development and present configurations of the field of human-animal studies across many cultures, continents, and times.

**Knowing Animals** Laurence Simmons 2007 Drawing on a range of perspectives - philosophy, literary criticism, art history and cultural studies - the essays collected here explore unconventional ways of knowing animals, offering new insights into apparently familiar relationships between humans and other living beings.

**Immanence and the Animal** Krzysztof Skonieczny 2020-03-19 This book reexamines the concept of the animal on the plane of immanence, as opposed to the traditional viewpoint founded on the plane of transcendence. Following Deleuze and Guattari's notion that philosophy is a discipline of creating concepts, this book traces how the concept of the animal was created in the history of philosophy through re-reading the works of Descartes, Kant, Heidegger, Derrida, and Levinas. Their theories show that the concept of the animal was constructed on the "plane of transcendence" as subservient to the self-serving human, who represents the animal as a negative entity devoid of reason, ethics, the ability to enter into political alliances or even die. With this perspective and a range of theories from thinkers such as Spinoza, Nancy, Haraway and Braidotti as the groundwork, a new positive concept of the animal, operating on the plane of immanence, is sketched out, compelling a reappraisal of the relationships between body and thought, ethics and politics, or life and death. With comprehensive interpretations of the views of several key philosophers, from Kant and Heidegger to Deleuze, Derrida and Agamben, this book will be valuable for scholars of theoretical animal studies and continental philosophy interested in the philosophical significance of the animal question.

**Routledge Handbook of Human-Animal Studies** Garry Marvin 2019-12-14 Human-animal studies is an academic field that has grown exponentially over the past decade. It explores the whys, hows, and whats of human-animal relations: why animals are represented and configured in different ways in human cultures and societies around the world; how they are imagined, experienced, and given significance; what these relationships might signify about being human; and what about these relationships might be improved for the sake of the individuals as well as the communities concerned. The Routledge Handbook of Human-Animal Studies presents a collection of original essays from artists and scholars who have established themselves internationally on the basis of specific and significant new contributions to human-animal studies. This international, interdisciplinary handbook will be of interest to students and scholars of human-animal studies, sociology, anthropology, biology, environmental studies, geography, cultural studies, history, philosophy, media studies, gender studies, literature, psychology, ethology, and visual studies.

**Animals in Greek and Roman Thought** Stephen Newmyer 2010-11-09 Although reasoned discourse on human-animal relations is often considered a late twentieth-century phenomenon, ethical debate over animals and how humans should treat them can be traced back to the philosophers and literati of the classical world. From Stoic assertions that humans owe nothing to animals that are intellectually foreign to them, to Plutarch's impassioned arguments for animals as sentient and rational beings, it is clear that modern debate owes much to Greco-Roman thought. Animals in Greek and Roman Thought brings together new translations of classical passages which contributed to ancient debate on the nature of animals and their relationship to human beings. The selections chosen come primarily from philosophical and natural historical works, as well as religious, poetic and biographical works. The questions discussed include: Do animals differ from humans intellectually? Were animals created for the use of humankind? Should animals be used for food, sport, or sacrifice? Can animals be our friends? The selections are arranged thematically and, within themes, chronologically. A commentary precedes each excerpt, transliterations of Greek and Latin technical terms are provided, and each entry includes bibliographic suggestions for further reading.

**Routledge Handbook of Climate Change and Society** Constance Lever-Tracy 2010-07-12 As the time-scales of natural change accelerate and converge with those of society, Routledge Handbook of Climate Change and Society takes the reader into largely uncharted territory in its exploration of anthropogenic climate change. Current material is used to highlight the global impact of this issue, and the necessity for multidisciplinary and global social science research and teaching to address the problem. The book is multidisciplinary and worldwide in scope, with contributors spanning specialisms including agro-forestry, economics, environmentalism, ethics, human geography, international relations, law, politics, psychology, sociology and theology. Their global knowledge is reflected in the content of the text, which encompasses chapters on American, European and Chinese policies, case studies of responses to disasters and of the new technological and lifestyle alternatives that are being adopted, and the negotiations leading up to the Copenhagen conference alongside a preface assessing its outcomes. Starting with an initial analysis by a leading climatologist, key issues discussed in the text include recent findings of natural scientists, social causation and vulnerability, media and public recognition or scepticism, and the merits and difficulties of actions seeking to mitigate and adapt. This accessible volume utilizes a wealth of case studies, explains technical terms and minimises the use of acronyms associated with the subject, making it an essential text for advanced undergraduates, postgraduate students and researchers in the social sciences.

**Posthumanist Perspectives on Literary and Cultural Animals** Krishanu Maiti 2021-09-11 This book offers Posthumanist readings of animal-centric literary and cultural texts. The contributors put the precepts and premises of humanism into question by seriously considering the animal presence in texts. The essays collected here focus primarily on literary and cultural texts from varied theoretically informed interdisciplinary perspectives advanced by critical approaches such as Critical Animal Studies and Posthumanism. Contributors select texts that cut across geographical and period boundaries and demonstrate how practices of close reading give rise to new ways of thinking about animals. By implicating the "animal turn" in the field of literary and cultural studies, this book urges us to problematize the separation of the human from other animals and rethink the hierarchical order of beings through close readings of select texts. It offers fresh perspectives on Posthumanist theory, inviting readers to revisit those criteria that created species' difference from the early ages of human civilization. This book constitutes a rich and thorough scholarly resource on the politics of representation of animals in literature and culture. The essays in this book are empirically and theoretically informed and explore a range of dynamic, captivating, and highly relevant topics. Comprising over 15 chapters by a team of international contributors, this book is divided into four parts: Contestation over Species Hierarchy and Categorization Animal (Re)constructions Interspecies Relationalities Intersectionality - Animal and Gender This book will be essential reading for students and researchers of Critical Animal Studies and Environmental Studies.

**Humans, Animals and Biopolitics** Kristin Asdal 2016-07-01 Human-animal co-existence is central to a politics of life, how we order societies, and to debates about who "we" humans think "we" are. In other words, our ways of understanding and ordering human-animal relations have economic and political implications and affect peoples' everyday lives. By bringing together historically-oriented approaches and contemporary ethnographies which engage with science and technology studies (STS), this book reflects the multi-sited, multi-species, multi-logic and multiple ways in which lives are and have been assembled, disassembled, practised and possibly policed and politicized. Instead of asking only how control and knowledge are and have been extended over life, the chapters in this book also look at what happens when control fails, at practices which defy orders, escape detection, fail to produce or only loosely hang together. In doing so the book problematises and extends the Foucauldian notion of biopolitics that has been such a central analytical concept in studies of human-animal relations and provides a unique resource of cases and theoretical refinements regarding the ways in which we live together with more than human others.

**The Routledge Handbook of Vegan Studies** Laura Wright 2021-03-31 This wide-ranging volume explores the tension between the dietary practice of veganism and the manifestation, construction, and representation of a vegan identity in today's society. Emerging in the early 21st century, vegan studies is distinct from more familiar conceptions of "animal studies," an umbrella term for a three-pronged field that gained prominence in the late 1990s and early 2000s, consisting of critical animal studies, human animal studies, and posthumanism. While veganism is a consideration of these modes of inquiry, it is a decidedly different entity, an ethical delineator that for many scholars marks a complicated boundary between theoretical pursuit and lived experience. The Routledge Handbook of Vegan Studies is the must-have reference for the important topics, problems, and key debates in the subject area and is the first of its kind. Comprising over 30 chapters by a team of international contributors, this handbook is divided into five parts: History of vegan studies Vegan studies in the disciplines Theoretical intersections Contemporary media entanglements Veganism around the world These sections contextualize veganism beyond its status as a dietary choice, situating veganism within broader social, ethical, legal, theoretical, and artistic discourses. This book will be essential reading for students and researchers of vegan studies, animal studies, and environmental ethics.

**The Routledge Handbook of Research Methods for Social-Ecological Systems** Reinette Biggs 2021-07-29 The Routledge Handbook of Research Methods for Social-Ecological Systems provides a synthetic guide to the range of methods that can be employed in social-ecological systems (SES) research. The book is primarily targeted at graduate students, lecturers and researchers working on SES, and has been written in a style that is accessible to readers entering the field from a variety of different disciplinary backgrounds. Each chapter discusses the types of SES questions to which the particular methods are suited and the potential resources and skills required for their implementation, and provides practical examples of the application of the methods. In addition, the book contains a conceptual and practical introduction to SES research, a discussion of key gaps and frontiers in SES research methods, and a glossary of key terms in SES research. Contributions from 97 different authors, situated at SES research hubs in 16 countries around the world, including South Africa, Sweden, Germany and Australia, bring a wealth of expertise and experience to this book. The first book to provide a guide and introduction specifically focused on methods for studying SES, this book will be of great interest to students and scholars of sustainability science, environmental management, global environmental change studies and environmental governance. The book will also be of interest to upper-level undergraduates and professionals working at the science-policy interface in the environmental area.

**Anthropocene Psychology** Matthew Adams 2020-02-19 This ground-breaking book critically extends the psychological project, seeking to investigate the relations between human and more-than-human worlds against the backdrop of the Anthropocene by emphasising the significance of encounter, interaction and relationships. Interdisciplinary environmental theorist Matthew Adams draws inspiration from a wealth of ideas emerging in human-animal studies, anthrozoology, multi-species ethnography and posthumanism, offering a framing of collective anthropogenic ecological crises to provocatively argue that the Anthropocene is also an invitation – to become conscious of the ways in which human and nonhuman are inextricably connected. Through a series of strange encounters between human and nonhuman worlds, Adams argues for the importance of cultivating attentiveness to the specific and situated ways in which the fates of multiple species are bound together in the Anthropocene. Throughout the book this argument is put into practice, incorporating everything from Pavlov's dogs, broiler chickens, urban trees, grazing sheep and beached whales, to argue that the Anthropocene can be good to think with, conducive to a seeing ourselves and our place in the world with a renewed sense of connection, responsibility and love. Building on developments in feminist and social theory, anthropology, ecopsychology, environmental psychology, (post)humanities, psychoanalysis and phenomenology, this is fascinating reading for academics and students in the field of critical psychology, environmental psychology, and human-animal studies.

**The Routledge Handbook of Food Ethics** Mary Rawlinson 2016-07-01 While the history of philosophy has traditionally given scant attention to food and the ethics of eating, in the last few decades the subject of food ethics has emerged as a major topic, encompassing a wide array of issues, including labor justice, public health, social inequity, animal rights and environmental ethics. This handbook provides a much needed philosophical analysis of the ethical implications of the need to eat and the role that food plays in social, cultural and political life. Unlike other books on the topic, this text integrates traditional approaches to the subject with cutting edge research in order to set a new agenda for philosophical discussions of food ethics. The Routledge Handbook of Food Ethics is an outstanding reference source to the key topics, problems and debates in this exciting subject and is the first collection of its kind. Comprising over 35 chapters by a team of international contributors, the Handbook is divided into 7 parts: the phenomenology of food gender and food food and cultural diversity liberty, choice and food policy food and the environment farming and eating other animals food justice Essential reading for students and researchers in food ethics, it is also an invaluable resource for those in related disciplines such as environmental ethics and bioethics.

**Speaking for Animals** Margo DeMello 2012-11-07 For thousands of years, in the myths and folktales of people around the world, animals have spoken in human tongues. Western and non-Western literary and folkloric traditions are filled with both speaking animals, some of whom even narrate or write their own autobiographies. Animals speak, famously, in children's stories and in cartoons and films, and today, social networking sites and blogs are both sites in which animals—primarily pets—write about their daily lives and interests. Speaking for Animals a compilation of chapters written from a variety of disciplines that attempts to get a handle on this cross

cultural and longstanding tradition of animal speaking and writing. It looks at speaking animals in literature, religious texts, poetry, social networking sites, comic books, and in animal welfare materials and even library catalogs, and addresses not just the "whys" of speaking animals, but the implications, for the animals and for ourselves.

**Considering Animals** Carol Freeman 2011 *Considering Animals* draws on the expertise of scholars trained in the biological sciences, humanities, and social sciences to investigate the complex and contradictory relationships humans have with nonhuman animals. Taking their cue from the specific "animal moments" that punctuate these interactions, the essays engage with contemporary issues and debates central to human-animal studies: the representation of animals, the practical and ethical issues inseparable from human interactions with other species, and, perhaps most challengingly, the compelling evidence that animals are themselves considering beings. Case studies focus on issues such as animal emotion and human "sentimentality"; the representation of animals in contemporary art and in recent films such as *March of the Penguins*, *Happy Feet*, and *Grizzly Man*; animals' experiences in catastrophic events such as Hurricane Katrina and the SARS outbreak; and the danger of overvaluing the role humans play in the earth's ecosystems. From Marc Bekoff's moving preface through to the last essay, *Considering Animals* foregrounds the frequent, sometimes uncanny, exchanges with other species that disturb our self-contained existences and bring into focus our troubled relationships with them. Written in an accessible and jargon-free style, this collection demonstrates that, in the face of species extinction and environmental destruction, the roles and fates of animals are too important to be left to any one academic discipline.

**Disability and Animality** Stephanie Jenkins 2020-03-26 The fields of Critical Disability Studies and Critical Animal Studies are growing rapidly, but how do the implications of these endeavours intersect? *Disability and Animality: Crip Perspectives in Critical Animal Studies* explores some of the ways that the oppression of more-than-human animals and disabled humans are interconnected. Composed of thirteen chapters by an international team of specialists plus a Foreword by Lori Gruen, the book is divided into four themes: Intersections of Ableism and Speciesism Thinking Animality and Disability together in Political and Moral Theory Neurodiversity and Critical Animals Studies Melancholy, Madness, and Misfits. This book will be of interest to undergraduate and postgraduate students, as well as postdoctoral scholars, interested in Animal Studies, Disability Studies, Mad Studies, philosophy, and literary analysis. It will also appeal to those interested in the relationships between speciesism, ableism, saneism, and racism in animal agriculture, culture, built environments, and ethics.

**Colonialism and Animality** Kelly Struthers Montford 2020-03-13 The fields of settler colonial, decolonial, and postcolonial studies, as well as Critical Animal Studies are growing rapidly, but how do the implications of these endeavours intersect? *Colonialism and Animality: Anti-Colonial Perspectives in Critical Animal Studies* explores some of the ways that the oppression of Indigenous persons and more-than-human animals are interconnected. Composed of 12 chapters by an international team of specialists plus a Foreword by Dinesh Wadiwel, the book is divided into four themes: Tensions and Alliances between Animal and Decolonial Activisms Revisiting the Stereotypes of Indigenous Peoples Relationships with Animals Cultural Perspectives Colonialism, Animals, and the Law This book will be of interest to undergraduate and postgraduate students, activists, as well as postdoctoral scholars, working in the areas of Critical Animal Studies, Native Studies, postcolonial and critical race studies, with particular chapters being of interest to scholars and students in other fields, such as Cultural Studies, Animal Law and Critical Criminology.

**Routledge Handbook of African Literature** Moradewun Adejunmobi 2019-03-13 The turn of the twenty-first century has witnessed an expansion of critical approaches to African literature. The *Routledge Handbook of African Literature* is a one-stop publication bringing together studies of African literary texts that embody an array of newer approaches applied to a wide range of works. This includes frameworks derived from food studies, utopian studies, network theory, eco-criticism, and examinations of the human/animal interface alongside more familiar discussions of postcolonial politics. Every chapter is an original research essay written by a broad spectrum of scholars with expertise in the subject, providing an application of the most recent insights into analysis of particular topics or application of particular critical frameworks to one or more African literary works. The handbook will be a valuable interdisciplinary resource for scholars and students of African literature, African culture, postcolonial literature and literary analysis. Chapter 4 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution-Non Commercial-No Derivatives 3.0 license. **Animal Places** Jacob Bull 2017-11-22 Nonhuman animals are ubiquitous to our 'human' societies. Interdisciplinary human/animal research has - for 50 years - drawn attention to how animals are ever-present in what we think of as human spaces and cultures. Our societies are built with animals and through all kinds of multispecies interactions. From public spaces and laboratories to homes, farms and in the 'wilderness'; human and nonhuman animals meet to make space and place together, through webs of power relations. However, the very spaces of these interactions are not mute or passive themselves. The spaces where species meet matter, and shape human/animal relations. This book takes as its starting point the relationship between place and human/animal interaction. It brings together the work of leading scholars in human/animal studies, from a variety of disciplinary and interdisciplinary backgrounds. With a distinct focus on place, physical space and biocultural geography, the authors of this volume consider the ways in which space, human and nonhuman animals co-constitute each other, how they make spaces together, produce meaning around them, struggle over access, how these places are storied and how stories of spaces matter. Presenting studies thematically and including a variety of nonhuman creatures in a range of settings, this book delivers new understandings of the importance of nonhuman animals to understandings of place - and the role of places in shaping our interactions with nonhuman creatures. As pets, as laboratory animals, as exhibits, as parasites, as livestock, as quarry, as victims of disaster or objects of folklore, this book offers insights into human/animal intermingling at locales and settings of great relevance to many areas of research, including geography, sociology, science and technology studies, gender studies, history and anthropology. This book meets the evolving interest in human/animal interaction, anthrozoology, and the environmental humanities in relation to the research on space and place that currently informs the humanities and the social sciences.

**Animals, Biopolitics, Law** Irus Braverman 2015-12-22 Typically, the legal investigation of nonhuman life, and of animal life in particular, is conducted through the discourse of animal rights. Within this discourse, legal rights are extended to certain nonhuman animals through the same liberal framework that has afforded human rights before it. *Animals, Biopolitics, Law* envisions the possibility of lively legalities that move beyond the humanist perspective. Drawing on an array of expertise—from law, geography, and anthropology, through animal studies and posthumanism, to science and technology studies—this interdisciplinary collection asks what, in legal terms, it means to be human and nonhuman, what it means to govern and to be governed, and what are the ethical and political concerns that emerge in the project of governing not only human but also more-than-human life.

**The Routledge Handbook of Vegan Studies** Laura Wright 2021-03-30 This wide-ranging volume explores the tension between the dietary practice of veganism and the manifestation, construction, and representation of a vegan identity in today's society. Emerging in the early 21st century, vegan studies is distinct from more familiar conceptions of "animal studies," an umbrella term for a three-pronged field that gained prominence in the late 1990s and early 2000s, consisting of critical animal studies, human animal studies, and posthumanism. While veganism is a consideration of these modes of inquiry, it is a decidedly different entity, an ethical delineator that for many scholars marks a complicated boundary between theoretical pursuit and lived experience. The *Routledge Handbook of Vegan Studies* is the must-have reference for the important topics, problems, and key debates in the subject area and is the first of its kind. Comprising over 30 chapters by a team of international contributors, this handbook is divided into five parts: History of vegan studies Vegan studies in the disciplines Theoretical intersections Contemporary media entanglements Veganism around the world These sections contextualize veganism beyond its status as a dietary choice, situating veganism within broader social, ethical, legal, theoretical, and artistic discourses. This book will be essential reading for students and researchers of vegan studies, animal studies, and environmental ethics.
