Sports-Related Concussions in Youth National Research Council 2014-02-04 In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

The Psychology of Sex Differences Eleanor E. Maccoby 1978 Lijvig en bijzonder goed gedocumenteerd werk over de verschillen tussen de seksen, wat betreft psychologisch functioneren. Met name bepaalde intellectuele capaciteiten en sociale gedragingen, waarvan algemeen wordt aangenomen dat ze verschillend zijn voor mannen en vrouwen, worden onder de loep genomen. De auteurs willen immers een onderscheid maken tussen enerzijds de meningen over sekseverschillen die een solide feitenbasis hebben en anderzijds deze die louter gebaseerd zijn op veronderstellingen. Het boek doorprijkt enkele mythen en geeft ook de sociale implicaties van deze 'ontmaskering' aan. In verband met onderwijs, is vooral het hoofdstuk over intellectuele capaciteiten en cognitieve stijlen van belang (p. 63-134).

La Palestine 1912 "The purpose of this report is to provide Congress and the Secretary of the Interior with a review of factors affecting anadromous fish resources in the Yakima River and recommend processes and procedures required to determine biologically based flows for increasing the abundance of salmon and steelhead. Flow management of the Yakima River by the U.S. Bureau of Reclamation, (USBR) Yakima Project would provide the primary mechanism through which these recommendations would be enacted. In determining the steps necessary to establish biologically based flows, SOAC interpreted its responsibility under Title XII to include evaluating many aspects of riverine ecology and consider flow management strategies which will potentially recover and maintain the aquatic ecosystem, rather than to evaluate reach-specific biological effects of the designated flows in Section (1)."-P. i.

Asian Americans James Robert Flynn 1991 This authoritative book shows how the gap between a group's mean IQ and achievement can be precisely measured, and then partitioned between two factors -- an important methodology with potential application for all ethnic groups. In this case, the author shows that Chinese Americans' occupational achievements are generally far beyond their IQ -- as if they had a mean IQ 21 points higher than they actually do. This unique approach to explaining group achievement emphasizes non-IQ factors such as historical origins, family, work ethic, educational tradition, personality traits, and social institutions.

Straphanger Taras Grescoe 2012-04-24 Taras Grescoe rides the rails all over the world and makes an elegant and impassioned case for the imminent end of car culture and the coming transportation revolution "I am proud to call myself a straphanger," writes Taras Grescoe. The perception of public transportation in America is often unflattering—a squalid last resort for those with one too many drunk-driving charges, too poor to afford insurance, or too decrepit to get behind the wheel of a car. Indeed, a century of auto-centric culture and city planning has left most of the country with public transportation that is underfunded, ill maintained, and ill conceived. But as the demand for petroleum is fast outpacing the world's supply, a revolution in transportation is under way. Grescoe explores the ascendance of the straphangers—the growing number of people who rely on public transportation to go about the business of their daily lives. On a journey that takes him around the world—from New York to Moscow, Paris, Copenhagen, Tokyo, Bogotá, Phoenix, Portland, Vancouver, and Philadelphia—Grescoe profiles public transportation here and abroad, highlighting the people and ideas that may help undo the damage that car-centric planning has done to our cities and create convenient, affordable, and sustainable urban transportation—and better city living—for all.
